NervusOS

The robot's Android

One system for every robot `one OS · any body`

> We've developed a universal robot operating system, connecting those who make robots, those who buy robots, and those who write applications. Robots from different brands can now install apps on demand, just like smartphones. A single robot can also have **a bunch of custom features**—just like Android did for smartphones.

Six Types of People in the Ecosystem `WHO'S IN THE ECOSYSTEM · ¥ = MONEY`

Personal User · C-end `consumers`

Use the home robot as a phone, install whatever is needed.

Companionship · Cleaning · Teaching Children · Rehabilitation

¥ Store Commission · Subscription

Industry users `who buys to work`

People who buy robots to work.

Factory · Warehousing logistics · Mall guide · Patrol security · Scientific research education

¥ Authorization · Service fee

Individual Developer `indie devs`

A single person can write an app for a robot.

Pet interaction · Fitness coach · Desktop assistant · Patrol script

¥ App revenue sharing

NervusOS

Robot Application Ecosystem

A system
Connecting six types of people

Enterprise Developers `corporate devs`

Move your own software to the robot.

Teams like Kewoos, Midea, and Haier that make smart hardware

¥ Authorization · Customization

We · Platform `us`

Set standards, manage ecosystem, review applications. All money goes through this layer.

Team · Operations · Developer Relations · App Store

OEM hardware makers `hardware makers`

People who make robots, pre-installed NervusOS at factory.

LOGO AgileX In Use　LOGO Unitree In Use

+ DeepRobotics · Fourier · AgiBot · Kepler · ···

¥ Pre-installed Authorization · Split

How to make money `THE BUSINESS MODEL`

We don't sell hardware. The body is handed over to the manufacturer, the application is handed over to the developers, and we only do the middle layer of the operating system—the money comes from **application revenue sharing** and **factory pre-installation authorization**. Traditional robots are one-time sales, and the relationship ends after the sale; with NervusOS installed, it can continuously grow new features, **the money keeps flowing**. We help manufacturers who only do B-end reach consumers, turning one-time hardware business into a continuously growing software ecosystem.

What have we verified in these three days `TRACTION · IN 3 DAYS`

30+ teams want to come to write App for us

4 Apps are under development

1 one is about to launch

2 Apps using RDK S100 running local vision/language large models

Development chain, ecosystem chain, this week they are running smoothly —— not a single PPT page, but real people are writing things on it.
